

PLRisk Cyber Insurance

What Is a Privacy & Network Security (Cyber) Liability Insurance Policy?

Cyber threats affect every profession - from dispensaries with online records to law firms storing sensitive information. The rise of spear phishing attacks (targeted, malicious emails disguised as trusted sources), business email compromise, employee negligence, and cyber extortion have made for a highly complex cyber security landscape.

Why Do Cannabis Businesses Need a Privacy & Network Security (Cyber) Liability Policy?

In today's litigious and regulatory environment, cannabis businesses need cyber protection to cover the defense costs and additional monitoring/notification expenses arising from claims of a data breach, theft, or misuse of proprietary information. At PLRisk we understand the cyber exposures your insureds face and are committed to keeping our pulse on emerging risks as hackers become increasingly more sophisticated. We work with top-tier, leading insurance companies to deliver cost-effective tailored Cyber Liability solutions that respond to threatening situations that can potentially compromise a company's customer, patient, and employee data or shut down an operation by infecting its network system, and disparage a firm's reputation.

Why Does a Business Need a Cyber Policy?

- » Network Security
- » Privacy Breach Response Costs
- » Network Asset Protection
